

Storyboards

A storyboard is a visual representation of a user journey or process, broken down into individual screens or steps. Each frame or panel shows a key scene with short descriptions of actions, interactions, and design elements.

Below is the storyboard of a food delivery app which was created in Balsamiq:

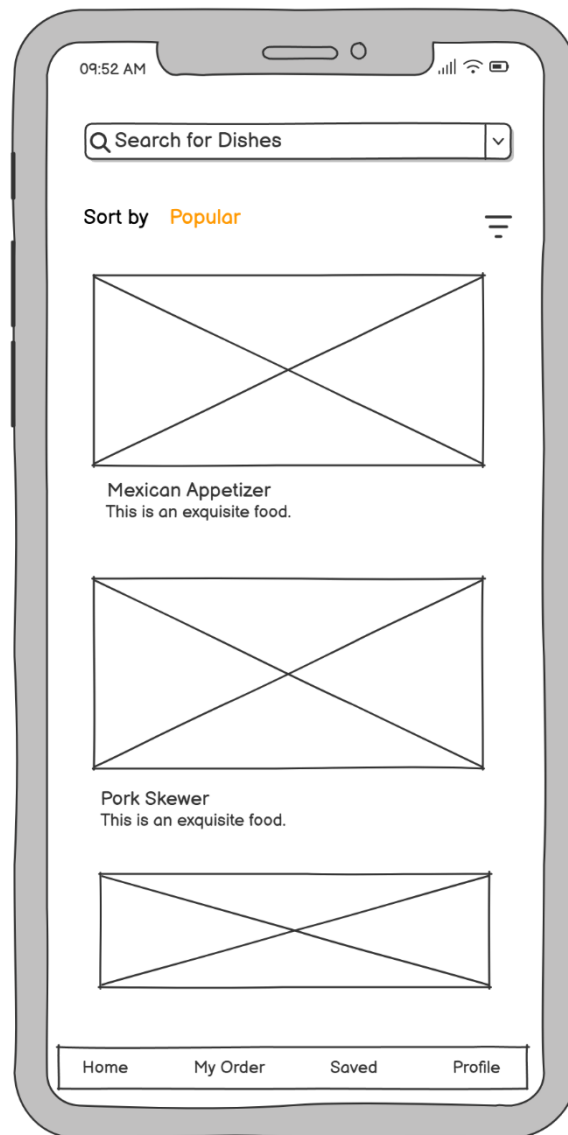

Home

User opens the app and sees the current time, search bar, and promotional offers (e.g., “30% OFF”).

User scrolls through highlighted categories like “Specials,” “Seasonal,” “Appetizers,” and “Main Course.”

User taps on a category (e.g., Appetizers) to view more items.

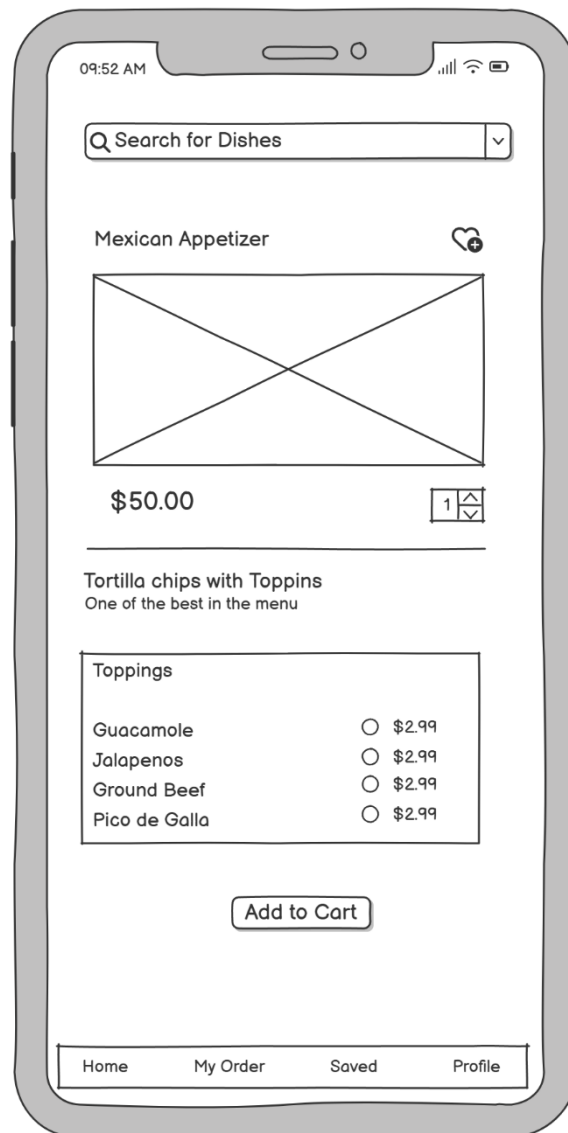

Category Browsing

User sees a list of dishes with images, brief descriptions, and prices.

User can use “Search for Dishes” to find a specific item.

User may apply a sorting option (e.g., “Sort by Popular”).

User taps on a food item (e.g., “Mexican Appetizer”).

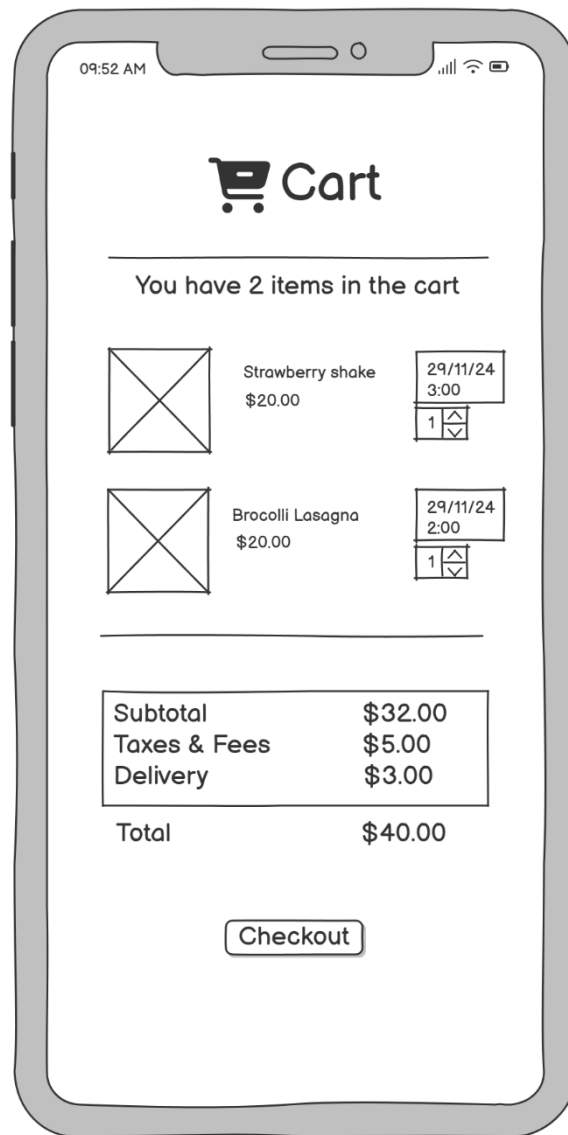

Food Details

User sees the selected dish, its price, and a description.

Optional toppings (e.g., Guacamole, Jalapeños) are displayed with additional prices.

User selects desired toppings.

User taps “Add to Cart.”

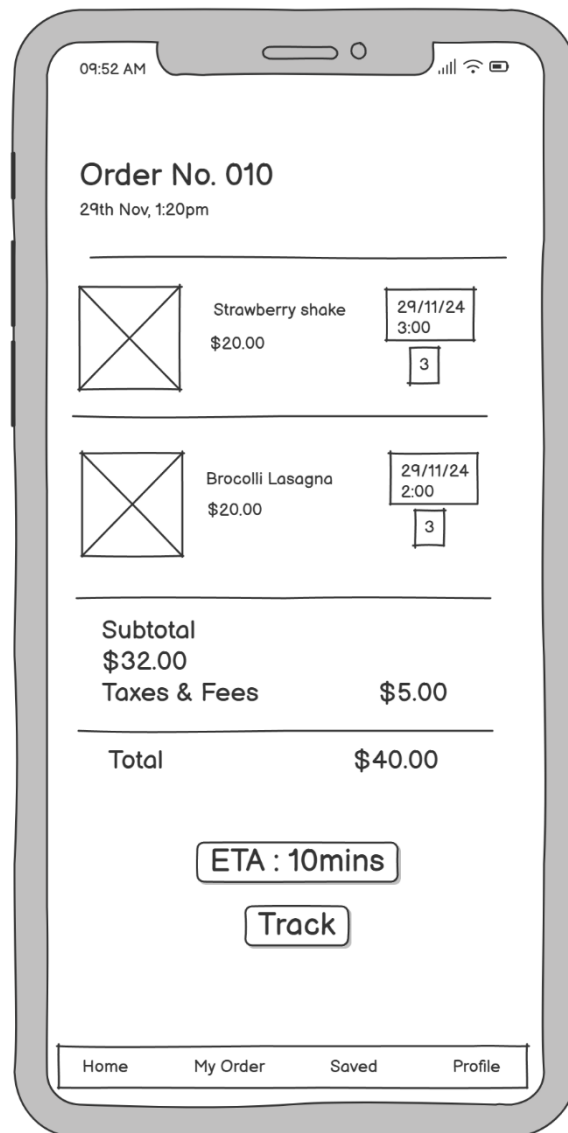

Cart

User sees a summary of the cart: items, quantities, prices.

Can increase/decrease quantity or remove items.

App displays Subtotal, Taxes & Fees, and Delivery Fee.

User taps “Checkout.”

Order Details

User sees Order Number, date/time of order, and items ordered.

Shows pricing breakdown and Estimated Time of Arrival (ETA).

Option to Track the order in real time.

User waits for delivery.

The full project design for the above storyboard could be viewed in the below link:
